Metallized Polyester Film Capacitors

MPET Dip Type (Sub Miniature) • Series Code 14

Item Code Description

Rated Capacitance

Three-digit (224) indicate rated capacitance in Pico Farad (First two digits indicate value & third digit indicates number of zeroes to be suffixed to first two digits). For example:

| i ui example. | | | |
|--------------------------|--------------|---------------|----------|
| $103 = 10 \times 10^3 =$ | 10000 pF | = 10 nF | =0.01 µF |
| $104 = 10 \times 10^4 =$ | 100000 pF | = 100 nF | =0.1 µF |
| $105 = 10 \times 10^5 =$ | 1000000 pF = | 1000 nF =1 µF | - |
| $106 = 10 \times 10^6 =$ | 1000000 pF | = 10000 nF | =10 µF |
| | | | |

Capacitance Tolerance

 $\mathsf{F}=\pm1\%,\,\mathsf{G}=\pm2\%,\,\mathsf{H}=\pm2.5\%,\,\mathsf{I}=\pm3.5\%,\,\mathsf{J}=\pm5\%,\,\mathsf{K}=\pm10\%,\,\mathsf{L}=\pm15\%,\,\mathsf{M}=\pm20\%,\,\mathsf{N}=\pm40\%$

Rated Voltage

One digit and one letter (2A) or two digits (05) indicate rated voltage

Rated Voltage Codification

Note: For more detail please contact rd@dekielectronics.com

Packing Type

- 1: Bulk packing (original pitch)
- 2: Bulk packing (after forming & cutting)
- 3: Ammo packing (after forming & taping)
- 4: Bulk packing (after forming in original pitch without cut)
- 5: Bulk packing (after formed & without cut)
- 6: Ammo packing (Straight lead)
- 7: Bulk packing (Straight lead cut)
- 8: Reel packing (Straight lead)

Reference Data

| Capacitance | 0.001µF to 1.5µF |
|---|---|
| Capacitance tolerance | ±2% to ±20% |
| Rated DC Voltage | 63Vdc to 630Vdc |
| Permissible AC Voltage at 50/60 Hz | 40Vac to 250Vac |
| Climatic testing class according to IEC 60068-1 | 40/105/56 |
| Maximum application temperature | 105°C |
| Rated temperature | 85°C |
| Reference standards | IEC 60384-2 |
| Dielectric | Polyester |
| Electrodes | Metallized |
| Construction | Mono |
| Encapsulation | Coated with flame retardant epoxy powder |
| Leads | Tinned wire |
| Marking on capacitor body | Type of capacitor, rated capacitance, rated tolerance, rated voltage and traceability code will be available on each and every capacitor. |
| Compatibility to RoHS | |

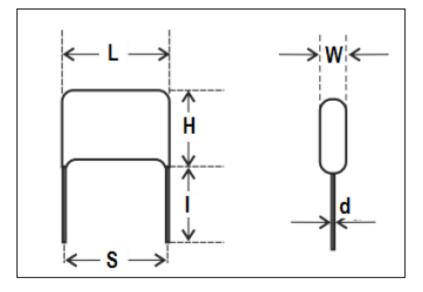

RoHS

Metallized Polyester Film Capacitors

MPET Dip Type (Sub Miniature) • Series Code 14

| at 25° C, relative humidity ≤70% | >100 Vdc | ≥7500 MΩ | ⊇ ≥250 | 0 s |

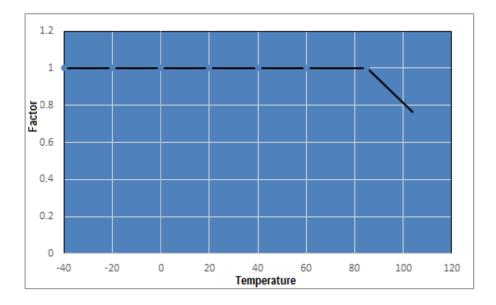

Endurance Test

Loaded at 1.25 times of rated voltage at 85°C or 1.25 times of the category voltage at 105°C for 1000 hours. Category voltage is 75% of the rated voltage.

| $\leq 10\%$ of initial value. |
|--|
| : ≤ 0.005 |
| $z : \geq 50\%$ of the value mentioned in specific data. |
| |

Temperature Derating Graph

For temperature between 85°C and 105°C a derating factor of 1.25% per °C on the rated voltage V_R has to be applied.

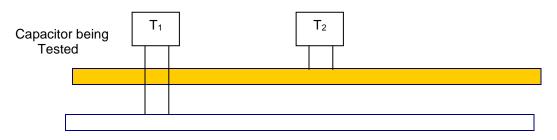

Power Dissipation and Maximum Component Temperature Rise

After applying the A.C voltage to the capacitor with certain frequency, we can measure the hot spot temperature of the capacitor. From that we can calculate ΔT .

 ΔT = hot spot temperature – ambient temperature

T1 is the capacitor under test (Connected in the circuit)

Distance between T_1 and T_2 should be about 50mm and 100mm from other components. To avoid radiation or convection, the capacitor should be tested in a wind-free box. The capacitor under test is separated by polysteryrene.

$$\Delta T_{max} = T_1 - T_2$$

at one frequency level the ΔT_{max} reach 10°C. That is the frequency which we have to start frequency derating.

Storage Conditions

Avoid storing the capacitors in places where the environmental conditions differ from the following:

Storage time: \leq 24 months from the date marked on the label glued to the package.

Temperature: -40 to 80°C

Humidity:

- Average per year:

For 30 full days randomly distributed throughout the year: ≤85%
Dew: absent

After a longer period of storage or use, the tolerance can increase; but, according to standard specification, it may never exceed twice the value measured at the time of delivery.

Disclaimer

All our capacitors are designed, manufactured and tested to specifications. We strictly adhere to standards in procurement of materials, in the laid down manufacturing processes and consistently apply stringent process controls and testing parameters. This ensures that our capacitors always perform to the offered specifications.

≤70%

Appropriateness of use in a specific circuit and fitness to a particular application however needs to be verified and its reliability through expected lifetime is required to be validated by the customer. Deki's responsibility is limited to ensuring that the capacitor performs as claimed in the specification/ data sheets provided by Deki. Deki specifically disclaims any implied warranties of fitness for any particular purpose. Liability, in any case is limited to the price paid for the capacitors.

T₂ is capacitor which has no connection
